

GYE NYAME

Fuel Saving Card

INTRODUCTION

The **GYE NYAME FUEL SAVING CARD** is the latest most advanced fuel economy and energy saving quantum physics solution in the world with zero damage to vehicles. It releases far-infrared rays and negative ions by itself to clean oil path ,achieve fuel-saving and also reduce emission of harmful gases from exhaust pipes which prolongs your engine life span.

The emergence of **GYE NYAME CARD** fills the gap in reducing fuel consumption, carbon emissions, energy saving and effectively removing carbon deposits. It uses quantum technology, a combination of negative ions and far infrared rays to change the arrangement of oil molecules atomizing combustion and making motor vehicles more powerful. It is an eco-friendly product which helps promote human health by creating a carbon free environment for a healthy life.

PRODUCT DETAILS: NANOTECHNOLOGY

MATERIALS : anions, iron power, tourmaline ceramic powder, far infrared, layers of synthetic high energy cards.

THE MOST ADVANCED FUEL ECONOMY AND ENERGY SAVING QUANTUM PHYSICS SOLUTION

FEATURES

01

100% legal and 100%
guaranteed [fully compliant
to safety standards]

02

Saves 15% to 30% on your fuel
consumption and electricity bills
[depending on the solidity of
your engine / appliance]

03

Extends lifespan of all
electrical appliances

04

Reduces and protects from
harmful electromagnetic
radiation

05

Embedded 25000 + negative
ions

06

No maintenance needed
plus Hassle free

USAGE:

Peel off the seal on the adhesive side of your energy saving card and wait 30sec to 1min

Attach to fuel tank cover(inside); another balance can be affixed to the car jet port or Air-box

Stick near power switch another balance can be affixed on the electrical appliances

- Wipe clean all dirty surfaces with a rag before sticking to prevent falling .
- Stick as many cards [until you get the balanced proportion of your engine capacity or electrical appliance

01

Use 1 energy saving card (less than 1000CC)

02

Use 2 energy-saving cards (1001CC-2000CC)

03

Use 3 energy-saving cards (2001CC-3000CC)

04

Use 4 energy saving cards (3001-4000CC)

05

Use 5 energy-saving cards (4001CC or more)

FUEL SAVING PRINCIPLE

Negative and positive ions combine an FIR energy to improve the fuel efficiency and reduces the Current loss

FUEL SAVING PRINCIPLES

- 1 Generation of negative ionized oil molecules by quantum technology.
- 2 Purifies the Air [negative ions release activate negatively charged oxygen molecules, Increasing the amount of oxygen inhaled up to 20% and reduces surface tension.
- 3 It can better atomize combustion and improve the efficiency of gasoline combustion to achieve fuel saving effect.

FUEL SAVING FUNCTIONS

- 1 Eliminate carbon deposits (effectively removes carbon deposits, reduce exhaust emissions, change oil passages to make oil passages smoother, etc.)
- 2 Low-carbon environmental protection (through the combination of quantum technology negative ions and far infrared, making vehicles more powerful)
- 3 Promoting health (Quantum technology filters harmful gases from fuel, reduces radiation from electronics)

THE MOST ADVANCED FUEL ECONOMY AND ENERGY SAVING QUANTUM PHYSICS SOLUTION

WARNING

- 1 Try not to touch with water or any liquid substance [in order not to lose effect]
 - 2 Do not prolong to sunshine [to avoid loss of efficacy]
 - 3 Do not damage the card material layer
 - 4 Fuel gate or any flat surface must be wiped clean, to prevent falling.
 - 5 Do not bend
-
